

Raising awareness of Deforestation (November 2021)

We are very proud of our Year 6 pupils who have started a campaign to stop deforestation in the Amazon Rainforest. They wanted to raise awareness among the local community and beyond.

Amazon Rainforest

South America, which is the 4th largest continent, has 12 sovereign countries. One of them in particular - Brazil - which is the largest out of the countries, is home to the popular, beautiful Amazon rainforest. The Amazon rainforest has only 2 seasons, which are known as the wet and dry, while we have four. Did you know in the rainforest there are two rivers that never meet?

Deforestation

Deforestation is the term used for the destruction of the rainforest. We can clearly see this is damaging the environment by chopping, burning and flooding land. People argue that this is right because it provides us humans with medicine. It is clear that other people argue against this. Scientists believe that in 25 years (or less) 28,000 species will be extinct. This does not only affect humans but it also greatly affects animals.

Courageous Advocacy

You can undoubtedly conclude from this, action should be taken but how do we? There are many ways to help the rainforest. Such as adopting an animal and paying for it. Also by spreading awareness for this serious situation. You should also try donate to charities to help raise money. Did you know that the size of a football pitch is taken down every minute? Thus, ruining animal habitats and without the habitats the species will die. The rainforest, which is half destroyed, needs your help.

DEFORRESTATION

Deforestation is where trees be slashed and burned by humans in Brazil.

To help from all the disaster we should donate and not eat food that has palm oil.

Deforestation is chopped for palm oil, electricity and food.

Save the Rainforest

Write to do:
- recycle paper
- collage animals
- reuse paper
- reuse plastic
- reuse glass

Deforestation can endanger our climate and cause bush fires.

Deforestation is when you chopping off a large area of a rainforest then burning it. SLASH AND BURN!
This is mostly taking place in South America - The Amazon Rainforest in South America.

It is said due to deforestation in 25 years 28,000 animals could be extinct.

Did you know that every minute the size of a football pitch of the rainforest is being cut down.

1/4 of all medicines and cure come from rainforest plants. If it is cut down we can risk many peoples lives.
